I was born here in the United Kingdom to parents from Hong Kong so I speak fluent Cantonese and English. I am currently studying the third year of a four year Electrical and Electronic Engineering degree at Imperial College London. During these few years, I have had to work in part-time jobs to support my accommodation and living costs and this has inevitably had a bad effect on my studies. This bursary, which will help relieve a lot of financial stress for me and hopefully I can concentrate more on my studies and continue to achieve good results to embark on a career in engineering. For the third year of my degree, I have specialised in electrical energy systems and power as I wish to work in the power industry upon graduation. My aim is to help develop and improve power systems so that they are better in terms of efficiency, durability and safety so that I can apply my knowledge and contribute to our society as the Wing Yip brothers have done here so successfully.
